EDENTA TWOGRIT FINE / COARSE DIAMOND BURS FG

GF844 TwoGrit Diamond

Special diamond instrument used for preparing and finishing without changing the instrument when preparing for a veneer. The working section of the Two Grit diamond instruments consists of two different diamond grits.The main conical section is coated with coarse diamond grit and the tip with fine diamond grit. The coarse grit enables rapid material removal and the fine diamond grit of the tip guarantees a perfectly finished preparation margin.
Speed opt. 70,000 - 140,000 rpm.

The **Occlusal shaper 972**, FGL which was specially developed for occlusal contouring, is suitable for all filling materials and also all-ceramic ZrO2 material for reliable contouring of the cusps and fissures using only one instrument. The round shape facilitates contouring of cusps and fissures. The curvature prevents cutting of notches. The fine and superfine grit produce a perfect surface for the subsequent polish.

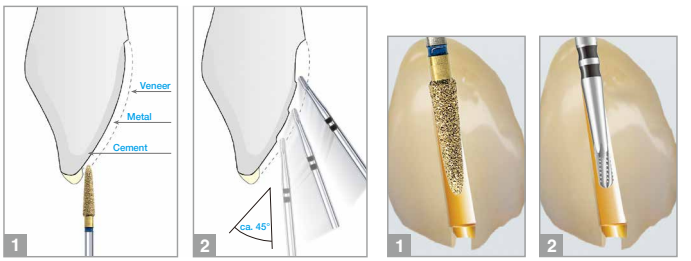
The guide pin acts as a spacer and provides for uniform depth of cut as well as controlled, minimal reduction of the tooth structure while preventing excessive preparation.



CROWN CUTTERS FG / FGL

edenta

User recommendations:

When cutting crowns and bridges the following should be observed:

1. The veneer should first be separated with a diamond instrument.
2. Crown material reduction of the crown material layer, which means starting the procedure from top to bottom end several times.

↻ max. 120'000 - 160'000 rpm
Contact pressure: 0.5 N

KT856 / KT881 KT CERAMIC CROWN CUTTERS DIAMOND FG

Order No.	KT856		KT881
ISO Size 1/10 mm	016		016
Length (mm)	8.0		8.0
FG Order No.	KT856FG016		KT881FG016
5 pcs/pack	$99.55		$99.55

For cutting all-ceramic restorations such as zirconium oxide and other all-ceramic materials. The exceptional stability of the special diamond grit provides for a long service life of the KT diamond instruments. The multilayer electroplated bond prevents the diamond grit from loosening prematurely. This results in an optimal removal rate with low vibrations when cutting all-ceramic materials.
The crown cutter KT856 is to be placed at an angle of 45°. To remove an all-ceramic restoration, the restoration must be slit along its axial wall towards the centre of the occlusal surface or the incisal edge. The restoration is then bent open with a suitable instrument (lever), causing it to fracture.The KT881 is suitable for grinding off fragment residues. Speed ideally 160,000 rpm, contact pressure < 2 N

C34 / C34L / C35L METAL CROWN CUTTERS TUNGSTEN CARBIDE FG / FGL

- Optimal cutting geometry
- High material reduction
- Virtually vibration-free

Specially coordinated for the separation of non-precious metal and gold crowns with an improved cutting capacity and service life compared with conventional crown cutters. The special compact blade configuration provides the C35L with controlled cutting behaviour and high cutting efficiency due to the optimally adapted tip-transversing blade with cross-cut. Use in the red contra-angle at 160,000 rpm; can also be used in a turbine.

Order No.	C34LT	C34LT

C34LT METAL CROWN CUTTERS TUNGSTEN CARBIDE FGL

New generation of crown cutters with TiN high-performance coating for optimal chip removal and smooth, low-vibration operation. The toothing with crosscut and overhead cutting edge ensures maximum cutting performance as well as a long service life, even when cutting non-precious metal crowns. The crown cutter C34LTFG012 is to be placed at an angle of 45°. The crown cutter C34LTFG016 can be used both at a 45° angle as well as flat. Notes on use: 1. cut open the ceramic veneer with a diamond instrument. 2. cut the metal framework with the crown cutter optimal speed 160,000 rpm, contact pressure 0.5 N

Order No.	C4AKXL		C4AKXXL
ISO Size 1/10 mm	014		014
Length (mm)	5.0		8.0
FGL Order No.	C4AKXLFGL014		C4AKXXLFGL014
5 pcs/pack	$79.75		$79.75

C4AKXL / C4AKXXL METAL CROWN CUTTERS TUNGSTEN CARBIDE FGL

For cutting low fusing veneering ceramics and metal frame in a single working step, easily and quickly. The novel Multi Cut toothing enables fast chip removal and ensures good instrument stability with a high breaking strength. The new toothing system ensures smooth and low-vibration operation. The crown cutters are to be placed at an angle of 45°.
Caution: the crown cutters must not be used for separating all-ceramic restorations made of extremely hard ceramics, e.g.zirconium oxide. Use a diamond instrument for separating all-ceramic materials.
Speed ideally 160,000 rpm, contact pressure: 0.5 N

Tungsten carbide finisher with shank length FGXXL (overall length 30 mm), for surgical peri-implantitis treatment. Used for removal of micro and macro structures on titanium implants as well as smoothing the surface, thus impeding the formation of new plaque.

Application

Only operate applying minimal pressure (<2N) and sterile coolant fluid. Optimum speed 40,000 rpm in the red-ring contra-angle handpiece. Move the finisher anticlockwise» around the implant to reduce the possibility of the instrument running off centre during preparation.

Carbide Burs FGXXL, 5 pcs/pack

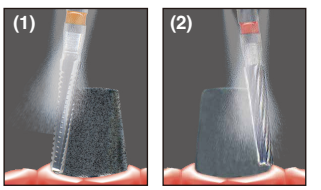
INTRAORAL CARBIDE BURS FINISHING FG WORK ON TITANIUM

Order No.	TC336FG016	TC379FG023
5 pcs/pack	$88.55	$88.55



Intraoral Finishing of Titanium Abutments

The use of titanium abutments in implant prosthetics requires special instruments for adjustments and adaptation, for example recontouring for adapting the path of insertion of the restoration on the titanium abutments. The tungsten carbide instruments with a coarse cross-cut, which were specially developed for trimming titanium alloys, guarantee optimal contouring of titanium materials (Figure 1). The titanium surfaces are then finished using the congruently shaped red ring finishers (Figure 2).

C254A BONE CUTTERS CARBIDE FGXL/FGXXL

Bone Cutter used for preparing bone and tooth structure. The special A-cut blades guarantee very quiet instrument running at the highest cutting capacity with maximum conservation of the tooth structure to be prepared. The long, slimline neck provides excellent visibility during preparation. Indications: Exposing and removing impacted wisdom teeth, apicectomies, preparation of bone structure and a bone lid, separating teeth and tooth roots. Drive: Only use a micromotor and red contra-angle. Do not use in a turbine as there is the risk of injury.
Speed opt. 80,000 rpm.
Apply only light pressure during preparation.

C254AAC BONE CUTTERS CARBIDE FGXXL

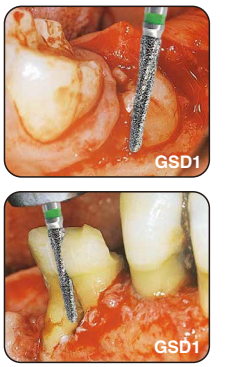
GSD1T Osteotom Surgery Diamond

For removing and smoothing bone as well as cutting tooth roots. The special shape together with the multilayer diamond coating ensure a gentle fit to the bone structure and thus less heat development.
In addition, the high-performance TiN coating ensures optimum removal of bone and tooth substance as well as a long service life.
Grit: *green / coarse = 151 µm - ISO 534*
Ensure sufficient cooling during the work process



Diamond coated bone cutter for bone incisions, removal and precision finishing. Also ideal for severing tooth roots.

T379X ADHESIVE REMOVERS CARBIDE RA

T379X Adhesive Removers

Tungsten carbide instruments for the removal of adhesive residues after removal of orthodontic brackets. Used at low speed, the instruments are highly effective for the coarse removal of remaining adhesive and only create a slight roughness depth. The special cutting geometry enables targeted and low-vibration removal of soft adhesive residues.The egg shape is particularly suitable for palatal removal of the adhesive when applying the lingual technique.
Advantages of the adhesive remover: a special TiN coating prevents smearing of the instruments' cutting edges. This allows for smooth and controlled removal of the adhesive residues, with only minimal heat development. Speed ideally 30.000 rpm

C22A ADHESIVE REMOVERS CARBIDE FG/FGL/RA/RAL

The perfect completion of a bracket treatment. New adhesive remover, specially designed for this task. Removes adhesive residues, does not damage the enamel and creates smooth surfaces.

- The special blades remove the resin without injuring the tooth
- The safety bevel at the end of the blades reduces the risk of cutting striations in the enamel surface
- The various lengths of blade simplify trimming smaller and larger areas
- The safe-tip prevents injury to the gingival margin

Adhesive Removers, 5 pcs/pack
C22AGK FG $99.55
C22ALGK FGL $99.55
C22AGK RA $99.55

12 pcs/pack	*$68.75*	*$68.75*	*$68.75*

OrthoFlex Polishers (adhesive removers)

There are several methods used for removal of residual resin after debonding of orthodontic brackets. Therefore, the method of removal of the residual resin is very important to avoid damages on enamel. However, carbide burs are harder than enamel and when used at high speed, can damage the underlying enamel. We recommend using our new developed OrthoFlex Polisher which produces the finest scratch pattern with the least enamel loss. Advantages of the OrthoFlex polisher: Used for reliable, gentle removal of residual adhesive without damaging the natural tooth structure achieved by a special grit, which despite having a high polishing capacity is not harder than the natural tooth structure. Especially reliable alternative to adhesive or cement residue removal using rotary diamond or metal instruments.
After removal of the adhesive the teeth are re-polished using: Exa Cerapol 1 = pre-polishing enamel, 2 = polishing enamel, Cerapol Super 3 = natural high lustre polish

StarTec RA Diamond Polishers

2-Step Polishing system with diamond particles, used for producing an intraoral high-lustre polish on zirconium dioxide, lithium disilicate (LS2), zircon-reinforced lithium silicate (ZLS) as well as hybrid-ceramic.The highly flexible polishing lamellae adapt to any surface structure thus creating perfect polishing results, even on areas difficult to polish such as occlusal surfaces. Recommended speed 6,000 rpm. Always use coolant, 50 l / min, when polishing. External cooling should be used when polishing with lamella polishers, which should be directed between the polisher and ceramic filling.
